

Bug Report:

1. Bug Title: Misleading permission request for media control redirects to sensitive notification access

Steps to Reproduce:

1. Open the application
2. Navigate to the main screen
3. Tap the Play button in the music panel
4. A popup appears: "Permission Required"
5. Tap "Okay"
6. App redirects to system Notification Access settings

Expected Result:

App should request appropriate permission related to media/audio playback

Actual Result:

App requests "Read and control notifications" permission

Severity: High

Device: Redmi 10C / Android 13

2. Bug Title: Audio distortion occurs after increasing volume boost

Steps to Reproduce:

1. Open the application
2. Navigate to Volume tab
3. Play any audio (music/video)
4. Increase the Boost level
5. Listen to the output audio

Expected Result:

Audio should become louder while remaining clear and stable

Actual Result:

Audio becomes distorted, producing unclear and cracked sound output at higher boost levels

Severity: High

Device: Redmi 10C / Android 13

3. Bug Title: Volume booster does not work for video playback

Steps to Reproduce:

1. Open the application
2. Enable volume booster
3. Open any video (YouTube / Video player)
4. Play the video
5. Increase volume

Expected Result:

Volume booster should amplify audio for all media types, including videos.

Actual Result:

Volume is not amplified during video playback

Severity: Medium

Device: Redmi 10C / Android 13

4. Bug Title: Red and Blue color options are not selectable in Edge Light customization

Steps to Reproduce:

1. Open the application
2. Navigate to Edge Light
3. Go to Color
4. Navigate to Customize section
5. Tap on Red color button
6. Tap on Blue color button

Expected Result:

Selected color should be applied to Edge Light or visibly selected

Actual Result:

Red and Blue color buttons do not respond to user interaction and cannot be selected

Severity: Medium

Device: Redmi 10C / Android 13

5. Bug Title: Text truncation in “Waterdrop” label under Notch Type

Steps to Reproduce:

1. Open the application
2. Navigate to Edge Light settings
3. Scroll to “Notch Type” section
4. Observe the label under the second option

Expected Result:

The label should display correctly as “Waterdrop” in a single line without breaking.

Actual Result:

The text is improperly broken into two lines (e.g., “Waterdro p”), causing poor readability and UI inconsistency.

Severity: Low

Device: Redmi 10C / Android 13

6. Bug Title: Volume boost levels do not match actual system output values

Steps to Reproduce:

1. Open the application
2. Ensure volume boost feature is active
3. Open any music player and play audio
4. Increase volume using device volume buttons
5. Observe the system volume indicator

Expected Result:

Volume increase should remain consistent with the defined boost limits and not exceed expected values

Actual Result:

System volume shows values beyond expected limits (e.g., 200%, 300%)

Severity: Medium

Device: Redmi 10C / Android 13

7. Bug Title: Incorrect discount percentage displayed for yearly plan

Steps to Reproduce:

1. Open Premium Upgrade screen
2. Observe Monthly plan price (BDT 550)
3. Calculate yearly price ($550 \times 12 = 6600$)
4. Compare with Yearly plan price (BDT 2800)
5. Observe displayed discount (“60% OFF”)

Expected Result:

Discount percentage should be accurate (~57.6%) or pricing should match exactly 60% discount

Actual Result:

App displays “60% OFF”, which is mathematically incorrect

Severity: Medium

Device: Redmi 10C / Android 13

8. Bug Title: Color preset change in Edge Light does not apply any visible effects

Steps to Reproduce:

1. Open the application
2. Navigate to Edge Light settings
3. Go to Color
4. Preset section
5. Select different color presets
6. Observe the edge lighting effect

Expected Result:

Selected color preset should be applied immediately

Actual Result:

No visible effect is applied

Severity: High

Device: Redmi 10C / Android 13

9. Bug Title: Volume booster remains active after being turned off

Steps to Reproduce:

1. Open the application
2. Tap the main toggle button (beside “Volume Amplifier” at the top)
3. Disable the feature and confirm by clicking “Okay” in the popup
4. Open any music player and play audio
5. Increase volume using device volume buttons

Expected Result:

Volume booster should be completely disabled

Actual Result:

Volume is still boosted (e.g., shows 200% or higher) which indicates booster is still active even after disabling.

Severity: High

Device: Redmi 10C / Android 13

10. Bug Title: Edge Light toggle does not apply changes and redirects to incorrect system action selection

Steps to Reproduce:

1. Open the application
2. Navigate to Edge Light section
3. Tap the ON/OFF toggle button (top right)

Expected Result:

Toggling ON should enable Edge Light effect immediately

Actual Result:

Edge Light is not activated after toggling ON and app redirects to incorrect system action

Severity: High

Device: Redmi 10C / Android 13

Test Case: 1

Project Name: Volume Amplifier App		Test Designed by: Md Mehedi Hasan Mazumder		
Test Case ID: TC_01		Test Designed date: 03/05/2026		
Test Priority (Low, Medium, High): High		Test Executed by: Md Mehedi Hasan Mazumder		
Module Name: Volume Boost		Test Execution date: : 03/05/2026		
Test Title: Verify volume boost increases audio beyond default limit				
Description: Test the volume boosting functionality				
Precondition: App is installed, volume booster is enabled, and audio file is available				
Dependencies: Device audio system and music player app				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open the app 2. Enable volume booster 3. Play audio in music app 4. Increase boost level	Any audio file	Audio volume increases beyond normal system level	As expected	Pass
Post Condition: Volume booster remains active and continues affecting audio output				

Test Case: 2

Project Name: Volume Amplifier App		Test Designed by: Md Mehedi Hasan Mazumder		
Test Case ID: TC_02		Test Designed date: 03/05/2026		
Test Priority (Low, Medium, High): High		Test Executed by: Md Mehedi Hasan Mazumder		
Module Name: Volume Boost		Test Execution date: : 03/05/2026		
Test Title: Verify ON/OFF toggle functionality				
Description: Test enabling and disabling booster				
Precondition: App is installed and booster feature is enabled				
Dependencies: Device audio system				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Tap main toggle button 2. Disable booster 3. Play audio in music app 4. Enable booster again	Any audio file	OFF => no boost ON => boost active	Volume remains boosted even after turning OFF the toggle	Fail
Post Condition: Booster state remains inconsistent with toggle status				

Test Case: 3

Project Name: Volume Amplifier App		Test Designed by: Md Mehedi Hasan Mazumder		
Test Case ID: TC_03		Test Designed date: 03/05/2026		
Test Priority (Low, Medium, High): Medium		Test Executed by: Md Mehedi Hasan Mazumder		
Module Name: Volume Boost		Test Execution date: : 03/05/2026		
Test Title: Verify preset boost levels (125%, 140%, 160%)				
Description: Test preset boost functionality				
Precondition: Booster enabled				
Dependencies: Device audio system and music player app				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open the app 2. Select 125% boost 3. Play audio in music app 4. Repeat for 140% and 160%	Any audio file	Each preset applies appropriate volume increase	As expected	Pass
Post Condition: Selected preset is applied				

Test Case: 4

Project Name: Volume Amplifier App		Test Designed by: Md Mehedi Hasan Mazumder		
Test Case ID: TC_04		Test Designed date: 03/05/2026		
Test Priority (Low, Medium, High): Medium		Test Executed by: Md Mehedi Hasan Mazumder		
Module Name: Volume Boost		Test Execution date: : 03/05/2026		
Test Title: Verify boost across different apps				
Description: Test boost functionality in multiple apps				
Precondition: Booster is enabled and multiple media apps are available				
Dependencies: Music app, video app, system audio				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Play audio in music app 2. Observe volume 3. Play video in video app 4. 2. Observe volume	Audio & video	Boost sound across supported apps	Boost works for music but does not apply to video playback	Fail
Post Condition: Boost applies across apps				

Test Case: 5

Project Name: Volume Amplifier App		Test Designed by: Md Mehedi Hasan Mazumder		
Test Case ID: TC_05		Test Designed date: 03/05/2026		
Test Priority (Low, Medium, High): Medium		Test Executed by: Md Mehedi Hasan Mazumder		
Module Name: Volume Boost		Test Execution date: : 03/05/2026		
Test Title: Verify system volume synchronization				
Description: Test system volume behavior with boost				
Precondition: Booster is enabled and audio is playing				
Dependencies: Device volume control and audio system				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Play audio in music app 2. Increase volume using device buttons 3. Observe system volume	Audio	System volume should behave consistently with boost	System volume shows inconsistent values (e.g., 200%, 300%) that do not match app boost levels.	Fail
Post Condition: System volume remains inconsistent with boost configuration				

Suggestions:

1. Improve permission transparency and relevance (Functional + UX)

Permissions not required by the app should either be omitted or properly justified for clarity purposes.

For instance, notification access isn't needed when using the app to adjust music volume.

2. Solve Edge Light customization and add visual confirmation (Functional + UX)

Any changes made in Edge Light customization (e.g., color selection, ON/OFF toggle) should instantly reflect in the app.

The app can provide visual confirmation if certain Edge Light customization requires some additional conditions to take effect (e.g., lock screen or notifications).

3. Address potential sound distortion (Functional)

Volume boosters shouldn't result in audio distortions.

Some form of audio limiting or optimization may solve this problem.

4. Enhance visual consistency and legibility (UI/UX)

Fix visual issues including but not limited to:

Text truncation (e.g., "Waterdro p")

Labels and sliders overlapping

Hidden or incorrectly aligned elements

Make sure your design is responsive across all devices.

5. Make sure price info is consistent (UX + Business)

Mathematical calculations behind discounts must be accurate.

Make sure your app displays:

Original price or price after applying discount

60% OFF label implies \$120 price becomes \$60 after applying discount, for example.
